Database and IT Management Tools

Idera, Inc.'s portfolio of database tools and IT management tools include best-in-breed database management tools for monitoring, securing, and improving data systems - on-premise, in the cloud, and in hybrid environments.

DATABASE MONITORING AND PERFORMANCE

SQL Diagnostic Manager for SQL Server: Monitor, alert, diagnose, and report on SQL Server availability and performance

SQL Workload Analysis: Monitor and diagnose detailed SQL Server wait states and application transactions *(add-on to SQL Diagnostic Manager for SQL Server)*

SQL Query Tuner: Troubleshoot and optimize database SQL queries for SQL Server *(add-on to SQL Diagnostic Manager for SQL Server)*

SQL Diagnostic Manager for MySQL: Monitor MySQL and MariaDB performance agentless and cost-effectively

SQL Doctor: Tune SQL Server performance, disaster recovery, and security with expert recommendations - *including for Azure SQL Database and Amazon RDS*

Precise for Databases: Monitor, diagnose, and optimize performance for multiple relational database platforms from a single user interface

DATABASE SECURITY AND COMPLIANCE

SQL Compliance Manager: Monitor, audit, and alert on SQL Server user activity and data change

SQL Secure: Monitor and manage SQL Server security - *including for Azure SQL Database and Amazon RDS*

DATABASE BACKUP AND ADMINISTRATION

SQL Safe Backup: Backup, restore, recover instantly, and virtual databases for SQL Server, Azure Blob Storage, and Amazon S3

SQL Inventory Manager: Discover, track, and manage SQL Server inventory - *including for Azure SQL Database and Amazon RDS*

SQL Defrag Manager: Automatically find and fix SQL Server index fragmentation

SQL Enterprise Job Manager: Monitor and manage agent jobs across SQL Server instances

SQL Admin Toolset: Simplify daily SQL Server administration tasks

DBArtisan: Manage and secure multiple relational database platforms from a single user interface

SQLyog: Manage MySQL and MariaDB including administration, development, and architecture

DATABASE DESIGN AND ARCHITECTURE

ER/Studio Business Architect: Create conceptual and business process models for business architecture

ER/Studio Data Architect: Create and manage data models for multiple database platforms from a single user interface

ER/Studio Data Architect Professional: Model data with a model repository for change management and version control

ER/Studio Enterprise Team Edition: Design and share data models and metadata across the enterprise

DATABASE DEVELOPMENT

Aqua Data Studio: Manage databases and data, and visual analytics for relational, cloud, and NoSQL databases

DB Optimizer: Optimize SQL queries for multiple relational database platforms from a single user interface

Rapid SQL: Develop high-performing SQL code for multiple relational database platforms from a single user interface

DB Change Manager: Track and manage complex schema changes for multiple relational database platforms from a single user interface

DATA AUTOMATION

WhereScape 3D: Scope and profile any data source and rapidly generate prototypes for approval by the business before build.

WhereScape RED: Metadata-driven automation to develop, deploy, document and operate data infrastructure faster via a drag-and-drop GUI.

WhereScape Data Vault Express: Automate the Data Vault 2.0 lifecycle and deliver analytics solutions to the business quickly and safely.

DATA LAKE PLATFORM

Qubole: Open, simple, and secure cloud data lake platform for machine learning, streaming, and ad-hoc analysis

IT MANAGEMENT

Precise for Applications: Track the performance of application transactions into relational databases for multiple application and database platforms from a single user interface

Uptime Infrastructure Monitor: Monitor and optimize IT infrastructure performance from a single user interface

SUITES

SQL Management Suite: Monitor performance, workload and compliance, tune queries, defragment indexes, and manage security and disaster recovery for SQL Server

SQL Performance Suite: Monitor performance, analyze workload, tune queries, and manage agent jobs for SQL Server

SQL Security Suite: Audit for regulatory compliance and monitor security for SQL Server

SQL Discovery and Tuning Suite: Manage inventory, monitor performance, analyze workload, tune queries, and defragment indexes for SQL Server

SQL Maintenance Suite: Manage disaster recovery, monitor agent jobs, and defragment indexes for SQL Server

SQL Toolbox: Administer, manage disaster recovery, and tune performance for SQL Server

DB PowerStudio: Administer, manage changes, tune SQL queries, and develop relational databases
